Let's prevent accidents together

Safety is everyone's concern, and no one should risk their health or their life when doing their job. We all deserve to go home safe and healthy after a day's work.

Accidents are still too common in the construction industry. However, countless accident-free worksites and industrial facilities have proven to us that all accidents can be prevented. A safe working environment is something that needs everyone's full commitment, but it is always worth the trouble.

This leaflet contains comic strips that illustrate themes related to workplace accidents in the construction industry. Accidents must be prevented beforehand – there is nothing we can do once it has happened. We hope that the RAXA comics will help remind you of the importance of making your workplace safe for everyone.
